1. Project Snapshot

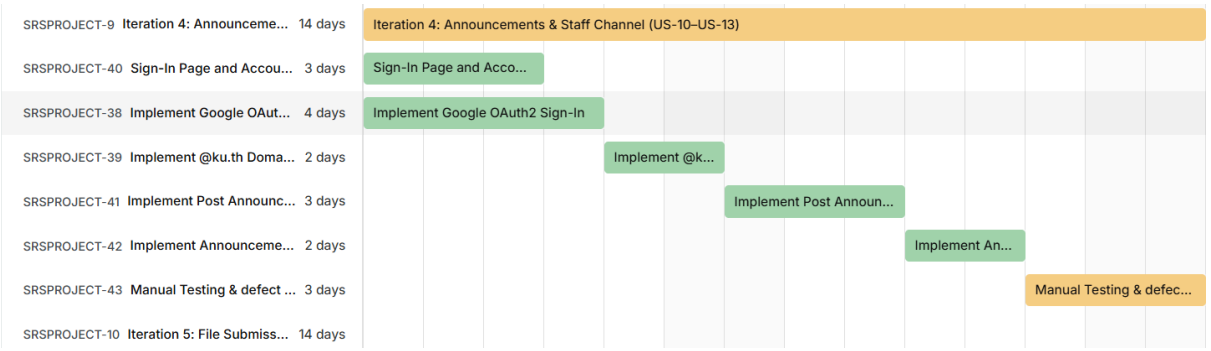

Note: This section must include both Gantt Chart for the whole project and the calculation of the critical path for the project, and each iteration. Created via Plane.so.
Note: Project Repository is mandatory for the report submission of Iteration 2. For Iteration 1, this can leave blank as "(WIP)".
Project Repository: [ThanawinTH/ISP-Left4Dead]

1.1 Project-Wide Gantt Chart

Critical Path: Requirements and SRS Finalization → Architecture and DB Design → Iteration 1: Classroom Setup & Membership (US-1, US-2, US-3) → Iteration 2: Role Assignment, Activity Management, Google OAuth2 & @ku.th Restriction (US-4, US-5, US-6, US-16) → Iteration 3: Dashboard, Schedule & At-Risk (US-7, US-8, US-9) → Iteration 4: Announcements & Staff Channel (US-10–US-13) → Iteration 5: File Submission & Status (US-14, US-15) → Iteration 6: Docker, Testing & Deployment
Critical Path Duration: 98 calendar days

1.2 Current Iteration Gantt Chart

Critical Path: Implement Google OAuth2 Sign-In → Implement @ku.th Domain Restriction → Implement Post Announcement →Implement Announcement List → Manual Testing & defect fixes
Critical Path Duration: 14 calendar days

2. Sprint/Board Status Snapshot

Note: User Stories Must Be Consistent User Stories in Software Proposal (Week 4). For Maximum Capacity , It Must Be:

- 3 User Stories for Iteration 4

Iteration Goal: Let staff post class announcements and let all classroom members read them in one list, and make sure only Kasetsart University (@ku.th) accounts can log in with Google. This supports Sub-Goals SG-5 and SG-1 from the SRS.

Capacity Declared: 3 user stories

User Story	Description	Owner	Status	Within Capacity (Y/N)	Notes
US-10	As a lecturer, TA, or University staff, I want to post an announcement to the class so that everyone sees the same notice.	Phutarak Wongpitak, Thanawin Thanapornthawan	Done	Y	Backend: announcements API where staff can post. Frontend: Class Announcements page. Covers SRS-15.
US-11	As a classroom member, I want to read the class announcements in one place so that I do not have to rely on an external chat group.	Phutarak Wongpitak, Thanawin Thanapornthawan	Done	Y	Backend: all members can read the announcements. Frontend: the announcements page and a sidebar link on 3 pages. Covers SRS-16.
US-16	As a lecturer or University staff, I want only Kasetsart University members to be able to log in, so that classroom data stays within the university.	Pakhin Daonan, Kantanut Utamapongchai	Done	Y	Carried over from Iteration 3. Backend is already pushed. Frontend: the login page signs in with Google and a refused account. Covers SRS-26 and SRS-27.

3. Scope Addition/Change Log

Note: Log any item added, expanded, or swapped in after planning began. Empty is a good sign; frequent entries signal scope creep.

Item added/changed	**Reason**	**What as dropped to compensate (one-in-one-out)**
Swapped US-12 and US-13 (staff channel) out of this iteration and brought US-16 (Google sign-in @ku.th only) in.	US-16 had already slipped past two iterations and is R-04 in our risk register. Every other story sits on top of sign-in, so leaving it longer meant more work would have to be done later.	US-12 and US-13 move to Iteration 5. This was not an exact one-in-one-out: one story came in, and two went out, so this iteration holds three stories instead of four.
Added the assignment page redesign: a new status route so a lecturer or assigned TA can change an activity's status (SRS-11), a rule that the TA check date cannot be before the students' due date, and one-page layout shared by lecturer, TA, and student.	The iteration 3 demo showed the three role views had drifted apart, and a TA could be given a check date after the students' due date, which made the task pointless. It was cheaper to fix before announcements were built on the same pages.	Nothing was dropped. The work was absorbed into the iteration, and it is the main reason only three user stories fit instead of four.
Did not deliver the four improvements the iteration 3 report listed for this iteration: the unassigned rule from SRS-12, the staff-side at-risk view, moving the owner and status fields behind the server, and an acceptance test in the repository.	The redesign and US-16 used the capacity these items were meant to fill	Nothing was dropped to compensate. All four are carried to iteration 5 and stay open.

4. Retrospective

What went well	What didn't go well	Action items for next sprint
US-16 is finally moving after being carried over twice. The backend was pushed early, and the login page now signs in with Google and explains a refused account.	US-16 was still delayed. It was carried over from Iteration 2 and was only worked on seriously in this iteration.	Make sure every story has a named owner and a start date on day one, so nothing is carried over again.
US-10 and US-11 share the same announcements API, so the posting and reading parts were built together instead of twice.	Some tests were only done manually near the end of the sprint, so problems were found late.	Write each story's test when the story is built, and push it to the repository before calling the story.

*5. Testing & Quality Notes *

Manual testing was performed on all three user stories and on the assignment page redesign.

US-16 (Google sign-in): signing in with a @ku.th Google account works and creates the session. Signing in with an account from any other domain is refused, the login page explains why, and no account is created (supports SRS-26 and SRS-27). Password login was removed, so the system no longer stores user passwords.

US-10 (post an announcement): an announcement with a blank title or a blank message is refused. The form marks the empty field in red, and the server refuses it as well with a 400 rather than trusting the page (supports SRS-15 and SRS-16). A student does not see the New Announcement button, and calling the endpoint directly as a student is refused with 403.

US-11 (read announcements): every member of the classroom, students included, sees the same list newest first with the author, their role and the time (supports SRS-17). A user who is not a member of the classroom is refused with 403. Searching and filtering of announcements were not built in this iteration. This is by design rather than deferred work, because the acceptance criteria for US-11 state the list is chronological only.

Assignment page redesign: the status buttons were checked as a lecturer, an assigned TA, an unassigned TA and a student. Only the lecturer and the assigned TA can change the status; everyone else is refused with 403, and an unknown status value is refused with 400. The TA check date is refused when it is earlier than the students' due date, both when creating an assignment and when editing one.

Note: any bugs, defects, tests (informal & formal) encountered and/or fixed during this iteration can be included here. If there is none, just put "(None applicable)" below.

None

6. Project Risk Register

Risk ID	Description	Likelihood (L/M/H)	Impact (L/M/H)	Mitigation/ Contingency	Status
R-01	Some tasks depend on other tasks and may cause delays.	M	M	Start important tasks early and tell the team when blocked.	Open
R-02	Frontend and backend may not work together correctly.	M	H	Test the API with the frontend early. Agree on the response format before implementation.	Open
R-03	US-16 (Google login with @ku.th restriction) was delayed for several iterations and may still have problems.	L	H	The backend is already pushed and the login page is done. Test with a valid @ku.th account and a refused account before closing.	Mitigated

7. Individual Contribution Log

Note: One row per member, filled in by that member. The submission of this file considered that the form below is consented and confirmed by the whole team. This section directly supports the Individual Project Contribution and Peer Evaluation grading components.
Note 2: For Iteration 1, evidence can be a reference to the video presentation/iteration report that is related to the responsible task(s) (e.g. Lalita's Evidence). However, for Iteration 2, the reference must be on **GitHub** file and commit only, which is uploaded by that team member.

Student Name	**Tasks owned this sprint**	**Course concept(s) applied**	**Evidence**	**Self-rated effort (1-5)**
Thanawin Thanapornthawan	US-10/11 front end	Role-appropriate views; validate in the browser and again on the server	announcements.html, js/announcements.js — f4e6c89, eaeb4ef	5
Phutarak Wongpitak	US-10/11 back end	One resource, two rules: staff post, all members read. Author and time set by the server	src/announcements.js, db/schema.sql — f8f1fa4, 89eaa3b	5
Pakhin Daonan	US-16 back end	Authentication vs authorisation; store no password the system does not need	src/auth.js, src/routes.js — e122417	5
Kantanat Utamapongchai	US-16 front end (index.html)	Clear error feedback: a refused account is told why instead of failing silently	index.html — c00e73d	5
